Modular
Reconfigurable
Ergonomical Design
Integrated Technonology

Transforms your branch into an efficient, customer-focused, retail banking environment

The Advantage Branch

Console™ is designed to

improve customer service

and retention, advertise

and promote products and

services, cross-sell to

existing customers, and

improve productivity and

decrease staff turnover.

Designed for 21st Century Retail Banking.

The Advantage Branch Console™ is a high quality, ergonomic, modular and reconfigurable furniture solution. It replaces typical high cost custom, built-in teller lines by providing greater efficiency, flexibility, and cost savings.

The Advantage Branch System Solution has been designed with many features aimed at improving customer service and retention, enabling tellers to become more effective and productive, and digital advertising for cross-sell opportunities.

Product Cross-Sell | Digital Advertising

The Advantage Branch Console provides a platform for improved customer communication. The Console is part of the Advantage Branch Systems Solution™, enabling the teller to handle common transaction problems and promote products and services. The customer facing LCD monitor is programmed to display a continuous loop of financial institution advertising messages and images reinforcing your existing advertising programs.

In addition to offering promotions on the reverse side of printed account statements, your teller can also quickly and easily print out a high quality, color brochure. "Smart Forms" can also print the customer's personal information (name and bank identification), so that the remaining product specific information for car loans, RV loans, etc., can be quickly and easily completed by the customer while at the branch or at home.

Solutions . . . that matter.

Advantage Branch Console™

Features and Specifications

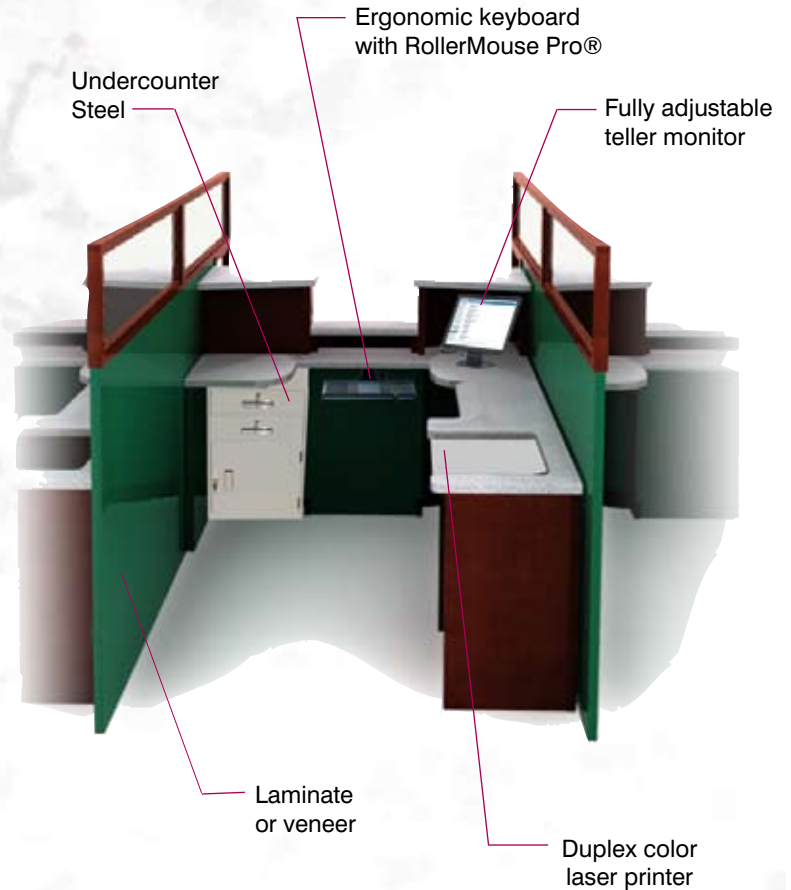

Ergonomic Design

The Advantage Branch Console is ergonomically designed to enhance the customer and teller experience. Each teller position features a full adjustable keyboard tray equipped with the RollerMouse Pro™ to minimize the incidence of repetitive motion injuries. Fully adjustable teller monitors help reduce eye fatigue and neck strain. The design insures proper relationships between teller, cash drawer and deal surface to minimize lost time occurrence caused by musculoskeletal disorders (MSD).

All together, the improved teller environment enhances positive morale and lowers teller turnover, saving the institution time and money, while greatly improving customer relationship and service.

Modular and Reconfigurable

Additionally, because it's modular and reconfigurable, you can change the layout later without replacing the teller line... you can change the look with simple architectural panel replacements... you can take it with you to another location, along with the rest of your furniture and equipment... you can install it quickly and easily... you can depreciate it faster... none of which can be done with a one time, custom millwork, built-in-place teller line.

Physical Dimensions
